MICR@S: External Pilot Phase of the Project in Belgium

The project coordinator, **Belgian-Italian Chamber of Commerce**, conducted the pilot testing phase in Belgium, involving students from Italian technical schools. The aim was to promote entrepreneurial skills among young people through innovative digital tools, such as the e-learning platform and the "CANVAS Game."

During the events, held in Brussels, students from Perugia and Lucera explored training materials, participated in quizzes, and worked in groups to develop business ideas. These workshops highlighted the enthusiasm of the participants, who demonstrated creativity and collaborative skills. At the end, their projects were presented and evaluated, reinforcing hands-on learning and confidence in their skills.

Evaluations showed a strong appreciation for the training content, which was considered useful and intuitive. Recommendations for the future include improvements to the game interface and platform, such as refining the registration process and optimizing the display of modules.
