MICR@S: External Pilot Phase of the Project in Greece

Greek partner, **Atlantis Engineering** conducted the pilot testing phase at the American Farm School in Thessaloniki, Greece.

The event, held on July 18, 2024, involved 39 students between the ages of 12 and 16 from public, private and vocational schools across the country. The participants, already trained in robotics and technology design, experienced new educational methodologies in an innovative environment.

During the four-hour test, students interacted with training materials through a digital platform and participated in a mini hackathon to develop entrepreneurial ideas. Despite some technical problems, such as platform crashes and difficulties with questionnaires, the event received positive feedback from both students and teachers.

Suggestions for future improvements included the importance of allowing participants early access to learning materials to familiarize themselves with the content. Teachers highlighted the educational value of the platform, particularly appreciating the quizzes for their impact on learning and memorization.

The pilot test demonstrated the potential of the MICR@S project in providing effective tools for entrepreneurship education, paving the way for future collaborations with schools and students.
